                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10 LPLLLSLQLTALCPTRAVEIYTSGALEAVNGTDVRLKCTPSSFAPVGDALTVT-WNFRPR 68
homotypic adhesion molecule in thymus histogeneeis.";

1. Cell Bit. 141.1021.1031.103

1. SURCINI: Heddates homophilic cell-cell adhesion

1. SURCINI: Heddates homophilic cell-cell adhesion

1. SURCINI: Moldates homophilic cell-cell adhesion

1. SURCINI: Moldates homophilic cell-cell adhesion

1. SURCINI: SPECIFICITY: Expressed in liver and gut, skin, and testis

1. Dur not in thymocytes, lymphocytes, macrophage or dendrific cells

Patent No. USZÓNGD12203AL

GRENERAL INFORMATION:
APPLICANT: CAMPAIGNE University Technical Services

TITLE OF INVENTION: Anomal family of beta sub-unit proteins from a voltage gated so TITLE OF INVENTION: Anomal canida encoding them and therapeutic or diagnostic uses TITLE OF INVENTION: Chalcate caids encoding them and therapeutic or diagnostic uses FILES REFERENCE: 54558-2601

CURRENT PAILNE ON THE . 2002-04-26
